Customized Design
Available

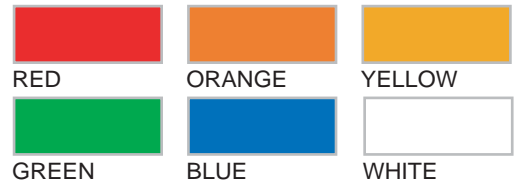

Act One LED lighting is the advanced lighting solution with energy-saving and long lifetime features. It has several key advantages, including lower cost of ownership. The features and advantages of Act One LED lighting make it a better alternative to the traditional incandescent light bulbs.

The LED lighting is tremendously energy-efficient comparing to incandescent light bulbs, up to 90% power saving. The LED lighting has years of lifetime expectancy of continuous use, which makes it virtually maintenance-free, and a much more cost-effective investment than traditional light bulbs, which typically last for thousands of hours only.

Act One LED lighting does not contain glass material, and therefore is a rugged construction and resistant to shock damages.

Act One LED lighting is designed for easy installation for both new fixtures and existing lighting retrofit. It uses the same bases and sockets as light bulbs, as well as the same voltage feed. The LED lighting is weatherproof and thus does not require special housing protection.

The followings are base colors of Act One LED lighting, while other colors are available. We also provide customized products tailor made to meet your needs, in addition to our standardized product line. Welcome to the next generation of lighting – see how Act One LED lighting illuminates you a brighter future.
