Modular Design for More
Customized Choices

Ease of Installation
Ease of Use

Act One Communications introduces the full-color, large-scale, seamless LED video displays screen designed to operate in both outdoor and indoor environments. The modular design allows fast installation and easy maintenance. Powered by the state-of-the-art LED display technology and experienced from more than 100 installations worldwide, our video display outperforms other display products in brightness, contrast, and quality.

With **Virtual Pixel** technology, we make possible a high resolution LED display without the intimidating price tag. It shows colors naturally without distortion thanks to our advanced 48-bit dynamic range video signal processing, and the ultrahigh brightness feature makes our video display literally glow even in direct sunlight.

The modular mechanical design of our video display forms a perfect fit to the mobility requirement of the event and concert staging,

as well as fixed installations. The real-time video stream relay allows the live participation of a large public audience in games, concerts, and events. The large LED video screen draws people's attentions and guarantees visibility. The display can be easily customized in size and configuration to meet your needs.

Welcome to the next generation of visual experience - The Act One LED video display gives you the power to communicate, to motivate, and to entertain.

High Resolution with **Virtual Pixel**

Normal Resolution

48-bit Dynamic Range Processing

Conventional 24-bit Processing
